IT Security Consulting

Organizational security has never been more important, more difficult or more comprehensive than it is today. Today's attackers include IT, systems and database professionals on the cutting edge of technology exploits. This new demographic is one of the reasons why security leaks and breeches have increased exponentially over the past five years. With an estimated 90% of critical data stored electronically, a breach of such data could leave an organization at risk for litigation, extensive recovery fees or complete ruin.

How We Deliver

By performing a routine assessment of your entire organization from policy and change control to physical, HR and DR/BC preparedness, Cynosure Solutions helps you identify exploitable holes and works with you to develop mitigation plans. We possess the knowledge of standard security best practices and understand the requirements needed for your business.

Any vendor can run a scan tool and generate reports, but Cynosure Solutions can take the wealth of information supplied by standard tools and provide a rich interpretation of the data. For security assessment activities, we provide a detailed description of gaps and weaknesses in your network, and map those to your business assets when possible so you can truly understand and assess the potential impact on your business. Prioritized by potential impact, we will work with you to develop an action plan to address vulnerabilities.

Why Cynosure Solutions?

- In-depth knowledge of multiple business industries and environments
- Framework and process based on Shared Assessments Program
- Customized security program designed to meet the specific needs of your company
- Team of senior certified security professionals (CISSP, CISA and/or CISM credentials)
